DETAILED ACTION

Claims 1-23 are pending in the application.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, 7-9 and 12-23, drawn to compounds, compositions, process of preparing and use of the compounds of formula I where A is phenylene and B is not a ring moiety, classified in class 540, subclasses 460 and 469.
- II. Claim 1-3, 6-9 and 12-23, drawn to compounds, compositions, process of preparing and use of the compounds of formula I where A is thiophenylene and B is not a ring moiety, classified in class 540, subclass 469.
- III. Claims 10 and 11, drawn to intermediate compounds of formulae (II), (III), (IV), (V), (VI) or (VII), classified in class 544, subclass 242+.
- IV. Claims 1-4, 7, 9 and 12-23, drawn to the compounds, compositions, process of preparing and use of the compounds of formula I where A and B are other than that which is outlined in Groups I and II, classified in class 540, subclass 450+.

The inventions are distinct, each from the other because of the following reasons:

Groups I, II and IV are directed to structurally dissimilar compounds such that the variable core created by the varying definitions of A and B in formula I do not belong to a recognized class of chemical compounds in the art, and references anticipating one

invention, would not render obvious the others, for example phenylene fused systems are different from thiophenylene fused systems, etc. Thus, separate searches in the literature as well as in the U.S. Patent Classification System would be required. Each group's compounds are made and used independently of each other and could support separate patents. The compounds differ significantly in chemical structures. One skilled in the art would not consider such diverse structures as functional equivalents of each other. The mere fact that there is a single similarity is not in itself a significant reason to render the whole embodiment obvious.

Inventions III and I, II, IV are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case the final product is deemed to be prepared by intermediates of formula II as well as by intermediates of formula III and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1624

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Tentative election of a single species within the elected group is further required.

If Group IV are elected further restriction may be required.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
